

Customer Reference: Urbana, OH

The City of Urbana initially contacted mPower in October of 2018 for a complimentary Map Review and Needs Analysis. During the Needs Analysis mPower learned that the city was using a GIS software that was not meeting their needs. mPower worked closely with their Public Works Director and Water & Wastewater Superintendents to develop a plan and proposal that took their hardware, software, and training needs into consideration. Purchase orders were issued before the end of October for the GPS hardware and training and in November the city purchased licenses of our Integrator and Editor software.

The following year, mPower focused on deployment, training and advancing the reaches and capabilities of their new GIS system. Toward the end of 2019, the city started evaluating various work management solutions. The city purchased mPower WMS (Work Management System) in January 2020. To date the City of Urbana has committed to utilizing their system city-wide and is creating users and applications to support the following departments: Water Distribution, Facilities, Finance, Fire ,Police, Court, Administration, Sewer Collections, Sewer Treatment, Water Treatment, Street, Park, Cemetery, Airport, Pool, Engineering, Utility Office and Landfill.
