About Us

mPower Innovations is a developer of innovative software solutions that draws upon more than 36 years of experience in the geospatial industry.

Over the past 15 years, our suite of software solutions has doubled, and our highly-trained and skilled services division has grown to accommodate large-scale GPS collections, extensive map and database conversions, and advanced utility network modeling projects.

Throughout our history, we have remained focused on empowering our clients to do more with purpose-built solutions that minimize the need for on going technical support.

The solutions we've developed are helping utilities across the country work smarter and more efficiently. In addition, our 'full-service' approach allows us assist organizations at any stage of GIS and Smart Grid Technology implementation.

Our software integrates with all industry-standard mapping platforms and other enterprise systems like, AMI, CIS, IVR, etc. Enabling our customers to maximize their maps and data without changing their workflow or existing systems.

HEADQUARTERS
Iron Mountain, MI

REGIONAL OFFICES
Appleton, WI
Grand Rapids, MI
